

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

the Crab, between the two first of the Twins, and the small stars in the head of the Hydra, having a southern latitude of seven degrees; being in a favourable sign, she is at Sun-rise nearly twenty degrees above the horizon. Jupiter is now above her, and Mars below her. Previous to this time, she will be seen, before Sun-rise, vying with Jupiter in splendour; and towards the end of the month, approaching within ten degrees of him, she will with him attract the attention of the early riser, towards east-north-east, long before Sun-rise, forming a fine contrast with the two first stars of the Twins above them. The Moon passes her on the 6th.

Jupiter is the morning star, the bright harbinger of day, in the early part, and attaining to a considerable height at Sun-rise before the end of the month. On the 1st, he is upwards of twelve degrees above the horizon at this time, and this height is every day increasing. The Moon passes him on the 5th.

Saturn is on the meridian at twenty-three minutes past nine in the evening of the 1st, and at twelve minutes past eight of the 19th. The Moon passes him on the 18th.

Herschell is on the meridian at 21 minutes past 6 in the afternoon of the 1st, and at seven minutes past 5 of the 21st. His motion is direct through half a degree; and the line between the first of the Balance and second of the Scorpion is our first guide to him; above which are the sixths and the third of the former constellation near the middle, and to the west of the sixths we shall discover our planet. The Moon passes him on the 15th.

Frend's Evening Amusements.

TO CORRESPONDENTS.

The Poetry signed S. does not suit the plan of our miscellany. The anecdotes of Joseph Winsloe are too local and uninteresting for public inspection. Several articles of Selected Poetry are laid aside, as under this head it would be improper to give any but pieces of high merit, or such as are not generally known.

The Continuation of the Dialogue on Signing the Protestant Petition; J. S.; C. E.; J. M. L., and some Original poetry, arrived too late for insertion in this number.

ERRATA.
